Vantage XC And Vantage GC

Advanced steam turbine control

Overview

Feedback

What is it?

Advanced Steam Turbine Control

For decades, CCC has delivered turbomachinery controls that set the standard for safety, efficiency, and reliability. We're continuing that tradition with the Vantage, a purpose-built system designed to handle all your turbine control needs.

With the Vantage, you'll gain command over a wide array of turbine controls, including:

- Speed
- Load
- Extraction header pressure
- Inlet header pressure
- Exhaust header pressure
- Tie-line power

The Vantage is pre-programmed and ready to configure, helping you achieve the dependable, cost-efficient operation you've come to expect from CCC turbomachinery controls.

How does it work?

The Vantage can be installed on the turbine deck for direct access to the steam turbine controls. Whether it is a standalone turbine for powering pumps, blowers, or generators, the Vantage is ready for simple configuration to provide automatic start/stop sequences and three critical speed zones.

What Problems Do They Solve?

The Vantage GC and Vantage XC provides complete turbine control within a simple to operate, sealed package ready for configuration and operation, keeping costs to a minimum. It replaces the Vantage GP and other older steam turbine controllers to keep your assets running for decades to come.
